Summary

AI Engineer and Data Scientist with a strong foundation in machine learning, statistical analysis, and full-stack development. I build and deploy real AI systems end-to-end — from model training and backend architecture to containerized, production-ready deployment. My current focus is agentic AI: designing multi-agent LLM pipelines that plan, research, self-critique, and synthesize, rather than relying on single-prompt wrappers. Equal parts data scientist and systems builder, I care as much about whether something ships cleanly as whether it works in a notebook.

Education

Sukkur IBA University Sukkur, Pakistan
Bachelor of Science in Computer Software Engineering 2024 – 2028 (Expected)

Skills

Programming Languages: Python, C++, Java, JavaScript
Agentic AI & LLMs: Multi-Agent Systems, Reasoning Pipelines, Prompt Engineering, OpenAI SDK, GitHub Models (GPT-4o/GPT-4o-mini), LLM Orchestration, Server-Sent Events (SSE)
Data Science & ML: Machine Learning, Statistical Data Analysis, TensorFlow, Keras, Matplotlib, Seaborn, Pandas, NumPy, Scikit-learn, Deep Learning (CNN), Model Training & Evaluation
Web & Backend: FastAPI, Uvicorn, React 19, React Router, Context API, Django, HTML5, CSS, Tailwind CSS, Streamlit
DevOps & Deployment: Docker, Docker Desktop, Containerization, Hugging Face Spaces, Image Building, Port Mapping, Container Deployment
Databases & Tools: SQL, Git, GitHub, Google Cloud, Google Gemini, API Integration, Microsoft Office
Concepts: OOP, Data Structures, Tkinter, Figma (UI/UX), Prototyping, Wireframing, Color Theory

Certifications

Google Cloud Gen AI Academy APAC Edition (Cohort 1) – Hack2Skill Apr 2026
Credential ID: 2026H2S04GCGENAIAPACC1-P00917
Intro to Machine Learning – Kaggle Apr 2026
Certificate of Completion: Claude 101 – Anthropic Mar 2026
Credential ID: qagzx8ygpka
Maximize Productivity With AI Tools – Google via Coursera Jul 2025
Introduction to SQL – DataCamp Feb 2026

Projects

ResearchPilot – Multi-Agent Autonomous Research System *Python, GitHub Models, FastAPI, OpenAI SDK, SSE, Docker* Jun 2026

- Built a multi-agent AI reasoning system for the Microsoft Agents League Hackathon (Reasoning Agents track) that autonomously decomposes complex research questions, retrieves sourced evidence, self-critiques coverage, and synthesises structured reports with citations.
- Architected a 4-agent pipeline – Planner (query decomposition into sub-questions), Researcher (evidence retrieval with sources), Critic (confidence scoring and gap detection), and Synthesizer (structured report generation) – using the OpenAI Python SDK pointed at GitHub Models free inference endpoint.
- Implemented a self-critique re-research loop where the Critic agent automatically identifies knowledge gaps and triggers additional Researcher calls when confidence falls below threshold, demonstrating iterative multi-step reasoning.
- Built a real-time web frontend using FastAPI and Server-Sent Events (SSE) streaming live agent pipeline progress to the browser; deployed on Hugging Face Spaces via Docker containerization at huggingface.co/spaces/zuhaibahmed7/researchpilot

AgroVision – AI Plant Disease Prediction System *Python, TensorFlow, Streamlit, Docker* Feb 2026 – May 2026

- Built an end-to-end AI web application predicting plant diseases from uploaded leaf images using a CNN trained on 54,000+ images across 38 disease classes; achieved 88% validation accuracy and 98% training accuracy.
- Developed an interactive Streamlit interface for real-time image upload, preprocessing (224x224 resize, normalization), and instant prediction output; containerized the full application using Docker for platform-independent deployment.

Canteen Token / Order Queue System *PHP, MySQL, HTML, CSS, JavaScript, XAMPP* Apr 2026

- Designed and developed a web-based canteen token and order queue management system for Sukkur IBA Uni-

versity as part of a Software Design and Architecture course project, replacing manual queuing with a structured digital solution.

- Implemented a Three-Tier Architecture (Presentation, Business Logic, Data Layer) with role-based access control for three user types – Customer, Canteen Staff, and Admin – each with dedicated interfaces for order placement, queue management, and dashboard reporting.
- Built core modules including automatic sequential token generation, FIFO queue management with real-time position tracking, order status lifecycle (Pending, Preparing, Ready, Collected), and on-screen customer notifications triggered by status changes.
- Applied three design patterns – Singleton (database connection), Factory (user role creation), and Observer (order status notifications) – and produced full SDA documentation including Use Case, Class, Sequence, Activity, and State UML diagrams.

FitWise – AI-Powered Fitness Assistant *Python, AI, Data Analysis* Feb 2026 – Mar 2026

- Built a fitness application generating customized workout plans based on user fitness level, goals, and equipment availability with AI-driven healthcare advice and a weight-tracking interface to visualize fitness journeys.

Movie Discovery App *React 19, React Router, Context API, LocalStorage* Jan 2026

- Developed a movie discovery web application using React 19 with real-time search, add/remove favorites, and data persistence using LocalStorage and Context API for state management.

ScriptFlow AI – Video Script Generator *Python, AI, API Integration* Jan 2026

- Created an AI-powered video script generator producing platform-aware scripts with hooks, scenes, and CTAs tailored for YouTube, TikTok, Instagram, and Ads in under 30 seconds.

Task Management App with GUI *Python, Tkinter, OOP* Jan 2026

- Developed a desktop task management application using Python and Tkinter with add/update/delete/view features; applied OOP principles to organize logic and improve maintainability.

Personal Portfolio Website UI Design *Figma, UI/UX* Nov 2024

- Designed UI/UX for a personal portfolio website in Figma including wireframes, prototypes, and three responsive interfaces covering color theory and user-centered design principles.
